

Tools

- **Construct**
Construct is a game making software which I have started to get familiar with and I will be using it to help create my slot game. I will need to learn how to design it and add certain sound affects for the game to run properly. I will also need to hard code the percentages and how slots actually work.
- **WordPress and Dream Host**
I will be using these to host the website because I am going to use it for our group project, and I will then be familiar with it.
- **GitHub Desktop**
This is where I will be committing documents to my repository for submission
- **Virtual Studio**
This is my main coding software for my project which works with Construct.
