

Tools

- **Construct**

Construct is a game making software which I have started to get familiar with and I will be using it to help create my slot game. I will need to learn how to design it and add certain sound affects for the game to run properly. I will also need to hard code the percentages and how slots actually work. Construct uses lots of “event” blocks which makes it very easy to see what I am coding.

- **WordPress and Dream Host**

I will be using WordPress for my website and have three pages, home page, account page, and slot page. Dream host is what I need to pay in order to get my site up on the web.

- **GitHub Desktop**

This is where I will be committing documents to my repository for submission.

- **Virtual Studio**

This is my main coding software for my project which works with Construct.
